## Commitment to quality, as standard Guaranteed quality for over 90 years

In 1919 Wilhelm Leschhorn founded the cornerstone of his wholesale business of technical products with the launch of its "cooperation for measuring equipment mbH". In the beginnings, the family business specialised in an assortment of device parts, standardised parts and measuring equipment. In the following years the product line has regularly been updated and adapted to current market developments.

Since its creation Leschhorn focused on meeting client's needs for products within production chains and continues its corporate philosophy of "Everything out of one hand" until the present day.

Leschhorn Logo – the original  
Leschhorn catalogue of standardised parts from 1959

## Specialist with multiple skills

For over 90 years Leschhorn has been your partner for industrial business-to-business trade of technical products. To deliver our promise of being a "guarantor for quality and performance", we continuously work with our engineers and experts to design innovative and purpose built products.

Our in-house production enables us to offer custom made products even for small quantity orders.

Permanent monitoring of suppliers and product markets allow us to adapt our product line accordingly and to provide a regular up to date and customer-orientated product range.

We are currently an established supplier to well-known companies of different market sectors such as chemicals, pharmaceuticals, automobile and packaging technologies as well as utility companies and the mechanical engineering industries.

Our clients now number around 7000 national and international companies that are currently in long term business relations with Leschhorn. Over the years these relationships evolved to being trustful partnerships, which shows that we are on the right track. It is the guarantee of long term partnerships based on trust, competence and responsibility that draws clients back to Leschhorn as this represents our key focus.

Outline product program – Leschhorn's catalogue of measuring equipment from 1964 - the original

## Your advantages

- » We carry out your purchase for technical products
- » We guarantee planning reliability through an extensive stock on hand
- » An outstanding product range for a one stop fulfilment
- » One contact to assist all your orders
- » Reduced number of orders
- » Reduced administration fees
- » You can order with your familiar item number of the manufacturer - We transcode for you
- » Combined packaging and shipping for cost reduction on small quantities

## Service and flexibility

Carry out your entire purchase of products with us. As a system supplier of C parts, we are happy to integrate with your preferred suppliers and tailor for your specific product enquiry.

With our help you can reduce your stock to maximise your possibilities  
Contact us for your individual consultation today

## High quality brands

Leschhorn – technical components for industry and the manual trade - partners with many strong brands. Our listed manufacturers see Leschhorn as a reliable and competent partner in distributing a variety of products

Find a complete selection of our cooperations at [www.leschhorn.de](http://www.leschhorn.de).

## Our product line— Your versatile selection

To facilitate your selection we have compiled our extensive assortment of approx. 60 000 products into nine main groups.

*Find our full range of  
products in clear sortation online  
at [www.leschhorn.de](http://www.leschhorn.de).*

On the website you can comfortably research parts you are looking for through our overall search facility.

Should you have difficulties finding your desired product within our online range, we offer a variety of items on request. Feel free to contact us directly for enquiries!

01

### 01 Standardised Parts and Operational Technology

- » Handles and knobs
- » Handwheels
- » Clamping and tension levers
- » Hand cranks
- » Scale rings

02

### 02 Telescopic Rails

- » Telescopic rails

With us you will always find the right route and person to contact!  
Our friendly team of consultants and experts is happy to help and guide you in the right direction

## Online Shop / Prices

From March 2013, we will update our website and online shop allowing you to find all our products and prices online and to easily place your orders directly from our website.

All the prices are to be understood as guidance prices without statutory value added tax (VAT). Items are often stated with scale prices to enable you to understand values for higher quantities.

Please mind that our online shop is still in developing stages and will therefore be continuously supplemented with new products. Should you be unable to find a particular product online, please contact us directly.

## Catalogue

The present catalogue 02 heavy duty rails comprises only one of nine product groups of Leschhorn's product spectrum. Our full range of products is to be found in printed form in our main catalogue and its supplement of innovative items.

A further subrange is to be found in our catalogue 06 Pipe connection technology. All catalogues are available to download from our website or to be send by mail on request.

## Express-Service

Are you in a hurry? - Is your order especially urgent? Please let us know and we are eager to process your order as quickly as possible. Provided your enquiry consists of an item in stock and your order reaches us by 2pm, we can ensure next day delivery.

## Field representation

You have a special enquiry or prefer personal contact?

We are happy to visit you and deal with your individual requirements.

Our friendly and competent external staff are available to you throughout Germany and in German speaking areas abroad.

## Extensive standard product range ex stock

*In Germany as well as in German speaking areas abroad the entire Accuride Quickship product range can be obtained by authorised distribution partners.*

Since its foundation in 1962 Accuride is the leading company in the development and manufacture of telescopic rails as well as access- and guide systems.

The products guarantee smooth action of its components, they contribute enormously to an optimal usage of space and efficient storage and further enable easy access for maintenance and repair works, according to European directive on machinery 2006/42/EG and 98/37EG.

Profit from an extensive standard product range of extending and linear guides! A multitude of standardised products is available ex stock and ready for delivery shortly after receipt of order. Despite extensive standardised solutions, high quality solutions can be produced for various different and specialised requirements.

### Manufacturer info

Accuride International is a global developer and manufacturer of ball bearing telescopic rails and pull out systems.

The company creates, produces and mounts all systems/components itself and therefore guarantees full control over all stages of the manufacturing process.

### Extended product range

Rails for smaller loads are also available. Beside the telescopic rails presented in this catalogue for heavy loads (load ratings from 100kg up to 438kg), Accuride rails for light (up to 50kg) and medium weight (50 to 99kg) load requirements can be obtained via Leschhorn. This also contains the media-hardware collection, rails with clip systems or rails with hanging frames.

### Quick delivery

The extensive Quick Ship program is especially adapted to clients needing a "readymade" service. Quick Ship offers a extensive range of rails and accompanying fittings and fixtures.

## Load rating

- » Unless specified otherwise, the named lifting capacities are the highest reachable with a pair of vertically mounted guides with a 450mm distance between rails/runners. For bigger distances please contact Leschhorn for an initial consultation.
- » The load rating changes depending on the length of the rail. Please refer to the details on the appropriate specification sheet.
- » For wider drawers, rails with higher load ratings and widths are generally required to withstand higher lateral loads. Our technical department is happy to consult and support you on this matter.
- » The readings refer to the centre point of the drawers in extended position and are stated in kg.
- » The mentioned load ratings are dynamic and have a statistic safety factor of 100% in the extended position.
- » A flat/horizontal installation of the rails reduces the load capacity by approx. 25% of the vertical loading rating. Not all rails are suited for a vertical installation.

vertically mounted =  
100% named load rating

horizontally mounted =  
25% named load rating

- » The subsidence of horizontally mounted telescopic rails varies depending on its application. We recommend the construction of a prototype to identify if the subsidence lies within acceptable parameters.
- » We further advise our clients to test rails in the allocated application.
- » All fixation points have to be used in order to reach the maximum loading rate.
- » Appropriate fixation points must be used.

## Specifics for load ratings

Type 9301/9308

The Accuride load ratings stated at the bottom represent typical applications and consider possible factors that can affect the performance of the rail.

Generally to consider: Lower load ratings apply to rails on extensions or drawers, which are wider than they are long. These also have rails with many loads and high cycles.

**Moderate usage up to 227kg**  
Load rating based on a 457,2mm rail with a 450 mm wide drawer, 10.000 cycles. A computer server-storage unit could be cyclically loaded once a month for maintenance purposes. Electronic instrumentation could be cyclically loaded several times a week. Typical applications are computer server-storage units or electronic instrumentation chassis.

**Frequent usage up to 182kg**  
Load rating based on a 457,2 mm rail in 1000 mm wide drawer, 75.000 cycles.

Example: Drawer will be opened and closed 3 times per hour during an 8 hours working day. This results in 60.000 cycles over a 10 year period. Typical applications are high-performance storage drawers, large pantry extensions or modular storage cupboards.

Mobile (vehicle) up to 136kg  
Load rating based on a 457,2 mm rail in 800 mm wide drawer, 10.000 cycles. For applications in combination with transport, vibration and rough usage, we recommend an additional safety lock for the 9308.

**Mobile (vehicle) up to 136 kg**  
Typical applications are leisure vehicle drawers, automotive battery extensions and cupboards in service vehicles.

**Horizontal Installation up to 45kg (not 9308)**  
Load rating based on a 457,2 mm rail in 812,8 mm wide drawer, 10.000 cycles. The subsidence of horizontally mounted telescopic rails varies depending on its application. We recommend the construction of a prototype to identify if the subsidence lies within acceptable parameters. Applicable at marginal installation space availabilities. Typical application: monitor cupboards

**Attention: This rail should never be used for sliding steps, platforms or any similar applications in which human loads are to be carried.**

Type 0522

The Accuride load ratings stated at the bottom represent typical applications and consider possible factors that can affect the performance of the rail.

Please consult Leschhorn regarding particular applications for which the load rating could be critical.

Moderate usage up to 180kg  
Load rating based on a 600 mm rail in 500 mm wide drawer, 10.000 cycles.

Frequent usage up to 140kg  
Load rating based on a 600 mm rail in 500 mm wide drawer, 40.000 cycles.

**Attention: This rail should never be used for sliding steps, platforms or any similar applications in which human loads are to be carried. Simply vertical installation.**

## Mounting arrangement / Calculation of carrying capacity of a heavy duty rail

» For an example of the calculation of the carrying capacity and an accurate mounting instruction - refer to page 55.

## Full extension / Partial extension / Over extension

Extension models are to be chosen depending on stability criteria and the requirements of the installation dimensions.  
 The extension length of a partial extension is 75% the length of the rail.  
 A full extension allows a pull out of the rail equivalent to the length of the rail. An over extension allows a pull out of the rail further than the length of the rail.

## Length of the rail (SL)

» The length of the rail equals the maximum length of a fully inserted rail.  
 Rule of thumb: Always use the maximum rail length possible for your purposes.

\*SL = Length of rail, TR = Length of extension

## Installation width

- » The installation width constitutes the space the rail requires between body and drawer.
- » For an optimal performance add +0.2 mm up to +0.5 mm of the rail's nominal thickness.  
 Example: For a rail with a nominal thickness of 12.7 mm the installation width should be between 12.9 mm and 13.2 mm.
- » Precision rails can not absorb huge gap aberrations between body and drawer. For optimal rail movement the body and drawer have to be accurate and parallel to each other.

## Particular characteristics

- » A rapid separation allows a simple connection and removal of the drawer (3607, 7957, DS5322, find outline on p.14-15).  
Handle - After operating a handle the drawer can be removed.  
However the resistance of the ball cage has to be overcome.  
Mounting rail - After releasing a locking mechanism the drawer can be lifted from the rail.
- » The latch / engagement stabilises the rail in extended and closed position until additional pressure is applied to open or close it.
- » Locking mechanisms keep the rails in the inserted or extended position until a handle is operated.
- » Self-closing (SC): A spring device supports the complete closure of the drawer and further prevents a recoil in closed position.
- » Self-closing with damping (EC) slows down the closing process and creates an optimal and smooth rail movement.
- » The setting cams (DS5322, p. 20) for drawers facilitate the mounting process by allowing an exact vertical adjustment of the front of the drawers.
- » The damping pins are made of hardened steel pins which are applied in between the rail profiles and thus prevent the transfer of vibrations and absorb any damaging shocks. (0522, p. 28)
- » Mounting options are for example bayonet insertions or angle brackets
- » Suffix for standardised rail characteristics:  
SC – Self-closing, EC – Self-closing with damping, DS – Stainless steel, DA – Aluminium

## Material/Surface

(For exceptions refer to individual data sheets)

### Rail elements

- » cold-rolled non alloy steel
- » cold-rolled stainless steel 1.4301 (austenitic)
- » aluminium (series 6000)

### Ball cages

- » cold-rolled zinc coated
- » stainless steel 1.4301 (austenitic)
- » synthetics (PA 6.6)

### Balls

- » hardened steel
- » stainless steel 1.4034 (ferritic)
- » synthetics POM

### Lubricant

- » high-low temperature grease, temperature range -20°C up to +110°C

## Area of application

Accuride telescopic rails are created to be used in closed indoor spaces and should be protected from excessive moisture, chemical steam, dirt and corrosion.

The self-cleaning ball cages guarantee an undisturbed and maintenance free movement of the rail by preventing access to the ball storage by foreign particles. Additionally, a lubricant is used with equal durability to the rails when used under normal conditions. However, should cleaning of the rails still be necessary, its recommended to lubricate the rails after the cleaning process with a high quality lubricant and extremely high compression strength.

- » Accuride telescopic rails with synthetic or rubber components are created for use in a temperature range of between -17°C and 70°C.
- » Accuride telescopic rails without synthetics or rubber components can be used in a temperature range of between -20°C and 110°C.
- » Extreme high temperatures can have a damaging effect on the lubricant, synthetics and rubber components.

## Quality

Accuride can offer high quality products that reliably work over their entire life-span having first class manufacturing and testing plants in place.

Accuride rails manufactured in Germany do not contain any of the following, from EU directives specified dangerous materials: From 2000/53/EG over end-of-life vehicles (27.06.02), 2002/95/EG to the restriction of usage of particular dangerous materials in electro- and electronic devices (27.01.03), 2002/96/EG and electro- and electronic end-of-life devices (27.01.03).

## Restrictions on lifetime warranty

Leschhorn guarantees a warranty for faults in the material and processing defects. Excluded from the warranty are general wear and tear marks, rails that have been inappropriately used, inappropriately installed or have been used against the product instructions and thus been damaged. However, Leschhorn will send a replacement. This warranty does not cover the costs of dismantling, installation or other similar costs.

The restrictions on lifetime warranty only apply to rails that are being sold and used in the member states of the European Union or the European Economic Community. This warranty does not influence the legal warranty liability.

## 5321EC

**Material**  
Galvanized steel, light passivated

**Load rating**  
Up to 100 kg

**Extension**  
Full extension

**Profile**  
H = 53,1 mm, B = 19,1 mm

### Description

- EC – Self-closing with damping
- Suitable for drawer width up to 1000 mm
- Extension power 25 N ± 5 N
- Soft Close-Damping system for the last 45 mm before closing
- Optional angle bracket fittings and fixtures for a diverse range of mounting possibilities

### Advice

- Recommended fixation: M5 countersunk head screw/Euro-countersunk head screw 6 mm
- Only vertical mounting
- We recommend the use of a centrally fitted pull handle for wide drawers
- Operational area 10°C - 40°C

### Fittings and fixtures

- Angle bracket fitting 635xx refer to page 42-45.

## DA4162

**Material**  
Aluminium rail – series 6000

**Load rating**  
Up to 150 kg

**Extension**  
**Over extension**

**Profile**  
H = 80,0 mm, B = 26,5 mm

### Description

- Ball cages and balls of stainless steel
- Corrosion resistant

### Advice

- The lifting capacity refers to a 600 mm rail pair spacing. These guides are suitable for wider applications
- Recommended fitting: M6/M8. All appropriate fitting points are to be used to reach the maximum loading rate.
- Only vertical mounting
- The end stops are tested, with the stated loading capacity by 10 cycles and a velocity of 0,8 m/s
- After exceeding 2000 cycles of movement we recommend to relubricate with a high quality high pressure lubricant.

DA4162	SL	TR	A	B	C	D	W*	L*

\* Weight and load rating per rail pair

A large grid of small dots for taking notes, covering the majority of the page.

## 7957

**Material**  
Galvanized steel, light passivated

**Load rating**  
Up to 160 kg

**Extension**  
Full extension

**Profile**  
H = 70,8 mm, B = 19,1 mm

### Description

- Suitable for drawer widths of 1000 mm
- Frontal rapid separation
- Optional angle fittings and fixtures for a divers range of mounting possibilities
- Optional horizontal-mounting

### Advice

- Recommended fitting: M5/M6 Countersunk head screw
- Side specific mounting - handles move in the same direction once the rail pair is installed.
- We recommend the use of a centrally fitted pull handle for wide drawers

### Fittings and fixtures

- Angle fittings and fixtures 635xxx refer to page 38-41.
- The enclosed screws do not fit the rail 7957. We therefore recommend the M6 countersunk head screw

\* Weight and load rating per rail pair

# Heavy duty rails up to 180 kg

## 0522

**Material**  
Galvanized steel, light passivated

**Load rating**  
Up to 180 kg

**Extension**  
Over extension

**Profile**  
H = 95,5 mm, B = 26,5 mm

### Description

- Rails available as singles
- Heavy duty construction
- Absorbing anti-shock blocks to protect against shock and concussion
- Coverage prevents the ball races from pollution
- Mounting angles on internal and external elements

### Advice

- DZ0522-1162 with additional fixation points (fourth hole) and distance A
- Recommended fixation: M6 screws at the extended internal side, M8 screws at the static external side rails pairwise
- Entire length (TL) = length of the rail + 24 mm
- Use all fixation points to reach the maximum load rating.
- Linking: large-scaled and buckle resistant

- Load rating can vary depending on application, refer to page 11.

\* State 'L' for left rail with locking and 'R' for right rail with locking, e.g. DZ0522-1159L

\*\* Weight per unit      \*\*\* Load rating per rail pair

A large grid of small dots for taking notes, covering the majority of the page.

## 9301

**Material**  
Galvanized steel, light passivated

**Load rating**  
Up to 227 kg

**Extension**  
Full extension

**Profile**  
H = 76,2 mm, B = 19,1 mm

### Description

- Rails available as singles
- Optional angle fittings and fixtures for a diverse range of mounting possibilities
- Optional horizontal-mounting
- Available lengths up to 1,5 m

### Advice

- Recommended fixation: screws M5/M6/ carriage bolts. Maximum bolt head of 4,8 mm and a 12,7 mm caliber

### Fittings and fixtures

- Angle fittings and fixtures refer to page 38–41.

- Load rating can vary depending on application, refer to page 11.

## 9308

**Material**  
Galvanized steel, light passivated

**Load rating**  
Up to 227 kg

**Extension**  
Full extension

**Locking**  
In extended and inserted position

**Profile**  
H = 76,2 mm, B = 19,1 mm

### Description

- Rails available as singles
- Confirmation about handle

### Advice

- Recommended fitting: M5/M6 Counter-sunk head screw
- Maximum bolt head height 4,8 mm and a 12,7 mm caliber
- Only vertical mounting
- Use rail 9301 as a supporting rail without locking.
- For locking on both sides order a pair of 9308 (L and R).

### Fittings and fixtures

- Angle fittings and fixtures refer to page 38–41.

- Load rating can vary depending on application, refer to page 11.

## DA4160

### Material

Aluminium rail – series 6000, cage ball (1.4301) and balls (1.4021) of stainless steel

### Load rating

Up to 300 kg

### Extension

Full extension

### Profile

H = 80,0 mm, B = 26,5 mm

### Description

- Corrosion resistant
- Sale in pairs

### Advice

- The lifting capacity refers to a rail pair with a 600 mm spacing. These guides are suited for wider applications
- Recommended fixation: M6/M8. All fixation points are to be used in order to reach the maximum load rating.
- Only vertical mounting
- The end stops are tested with 10 cycles and a velocity of 0,8 m/s under the stated loadin
- After exceeding 2000 cycles we recommend the lubrication with a high quality high pressure lubricant.

# Vertically mounted ## Horizontally mounted

### Description

- Linear guide with ball carriage
- Aluminium rails, lengths 1,2 m und 2,4 m
- Customer cuts rail to the desired lengths and carries out drilling
- Ball carriage is available separately: Balls of stainless steel, synthetic balls: lubricant free, run smoothly
- Corrosion resistant, dirt and dust resistant
- End stops are available separately
- Different mounting possibilities

### Advice

- Recommended fixation: 4 mm-counter-sunk head screw/M4 countersunk head screw
- Install rail on strong and straight surface as stated.
- Be careful when injecting the carriage into the rail
- Unlimited lengths of rails are possible.
- Use a drilling template (separately available) and pins (not in the shipment) for a permanent connection.
- Please refer to the illustration for mounting possibilities and load ratings.

## DA0115RC

### Material

Rail: Aluminium  
Carriage: Stainless steel and nylon

### Load rating

Up to 120 kg

### Profile

H = 40 mm, B = 12,3 mm

Product	Order number	W* kg
1,2 m-rail x 1 (without fixation holes)	DA0115-0120RC	0,635
2,4 m-rail x 1 (without fixation holes)	DA0115-0240RC	1,270
1,2 m-rail x 1 (with fixation holes x 12)	DA0115-0120RCH	0,635
2,4 m-rail x 1 (with fixation holes x 24)	DA0115-0240RCH	1,270
Carriage (balls of stainless steel) x 1	DS0115-CASSRC	0,120
Carriage (synthetic balls) x 1	DP0115-CASSRC	0,085
End stops (1 unit + 2 screws)	DA0115-STOPRC	0,007
Drilling template x 1	DZ0115-DJIGRC	0,080

\* Weight per unit

## 634xx Platform bracket

for 9301 / 9308 / 7957

Material: coiled rolled steel

Possible mounting: 4 on the bottom and 2 on the side

Brackets suit both sides

Fixation elements are inclusive for 9301 / 9308

Bracket lengths (BL):  
305 mm, 406 mm, 559 mm, 711 mm

### Construction kit

- 2 x Brackets
- 4 x 6.4 x 15.9 Hexagonal head bolts
- 4 x 6.4 Hexagonal nuts and safety washers

### Advice

- Four bracket lengths can be used to cover all rail lengths, individually or in combination.
- The enclosed screws do not fit the rail 7957.
- We recommend the use of the M6 counting-sunk head screw. The customer provides consumables for the mounting process of brackets at the base or the platform/drawer.
- To find out the quantity of brackets needed refer to the table on page 40–41.

for 5321 / 5321EC

Measurements only shown for general orientation

IM = Inside rail, OM = Outside rail

### 5321EC

5321

## DZCC11-AD Cable tray

for 3607 / 5321SC / 5321

Material: Galvanized steel, light passivated

Cable guide widths: 72 mm

Weight per unit : 0,93 kg

### Description

- Wide and slim cable management arms
- Opens/closes similar to an accordion
- Suitable for 2 HE and higher
- Simple separation from the chassis

### Advice

- Not suitable for rails exceeding a length of 700 mm.
- Use a minimum of 2 fixation holes at the end of each bracket.

## DZCC5AD Cable tray

for 3607 / 5321SC / 5321

Material: Galvanized steel, light passivated

Cable guide widths: 31 mm

Weight per unit: 0,47 kg

### Description

- Wide and slim cable management arms
- Opens/closes similar to an accordion
- Suitable for 2 HE and higher
- Simple separation from the chassis

### Advice

- Not suitable for rails exceeding the 700 mm length.
- Use a minimum of 2 fixation holes at the end of each angle bracket.

## DZCC11-AD

## DZCC5AD

## Mounting brackets

Optional brackets are available to facilitate the mounting process of the rails in an electronic rack/housing

### Advice

- All angle brackets are delivered as complete construction kits with fixation components (without bead nuts).
- Short brackets are generally used at the front of the chassis and long brackets at the back.

### Direct mounting, general housings

01. Make sure the cabinet sides are parallel to each other and the chassis-sides are parallel and at right angles to the body.
02. Firstly mount the rails on to the beads of the body and then the chassis on to the rails
03. Test the chassis for a balanced movement without jerk.
04. If the rail movement is irregular or gets stuck:
  - » Loosen the screws of the main body and then the ones on the chassis.
  - » Move the unit back and forth a few times.
  - » Once the movement has improved, tighten the screws and move it back and forth again.
  - » If the movement remains irregular, please test the measurements of the body and the chassis.

### Mounting of the electronic body on to the trays with Accuride brackets

01. Make sure the cabinet sides are parallel to each other and the chassis-sides are parallel and at right angles to the body.
  02. Using assembly kits and brackets, mount the brackets on to the rail-body components.
  03. Fit the rails into the rack and secure with rod nuts.
  04. Mount the rail on to the chassis
  05. Test the chassis for a balanced movement without jerk.
  06. If the rail movement is irregular or gets stuck:
    - » Loosen the screws at the back of the bracket and reset it (fig. c1)
    - » Loosen the screws of the chassis (fig. c2)
    - » Move the unit back and forth a few times
    - » Once the movement has improved, tighten the screws and move it back and forth again.
- » If the movement remains irregular, please test the measurements of the body and the chassis.

## Bracket DZ63490-4

for 3607 / 5321 / 5321SC

### Advice

- Every unit contains 4 brackets, 4 bead nuts, 8 screws for the bracket, 8 oval head screws.
- Caged nuts are not included in the delivery package

### Brackets

### Bead nuts

## For numerous industrial practices

Compared to conventional telescopic rails (mainly galvanized, non alloy steel) Leschhorn's heavy duty rails are known for their especially solid structure and high load ratings.

The milled heavy duty-telescopic rails are considerably stronger in resisting side pressures than conventional telescopic rails. Especially here, high pressures affect the ball-bearing movement which is not to be underestimated.

## In-house manufacture

Our in-house production enables us to offer custom-made solutions. Individually adapted designs are especially common for high load ratings. Custom designs specifying length, material and drilling are possible. Depending on the type of rail, we offer a choice of extensions of rail lengths between 300 mm to 3000 mm which are available in steel, stainless steel and aluminium.

## Service & Advice

To meet your individual standards and requirements or for specific questions about load ratings and other queries, our team of experts is happy to help. Do not hesitate to contact us about your individual requirements and we will happily provide an appropriate quote for you.

Phone: 004969 - 420 97 60

### At a glance!

#### Heavy duty rail (per pair in extended position)

Extensions: depending on type, from 300 mm to 3000 mm  
Load ratings: depending on type, from 60 kg to 2.700 kg

#### Linear guides

Gliding length: up to approx. 2.920 mm

## Load rating

- » If not specified otherwise the presented lifting capacities are the highest reachable for a pair of guides mounted laterally with a 1000 mm rail spacing. For bigger spacing please contact our staff first for an individual consultation.
- » The load rating varies depending on the length of the rail. Please find further details on the appropriate data sheets.
- » Wider drawers generally require rails with higher load ratings to withstand stronger side pressures. Our technical support is happy to assist you on this matter.
- » The stated figures refer to the centre point of the drawers in the extended position and are specified in kg.
- » The load ratings shown are static. Leschhorn rails have a static safety factor of 30% in the extended position.
- » Horizontal/flat mounting of the rails decreases the resilience to approx. 30% of the vertical (side) load rating.

Vertically mounted =  
100% of stated load rating

Horizontally mounted =  
30% of stated load rating

- » The subsidence for horizontally/flat mounted telescopic rails varies depending on its purpose. We recommend the construction of a prototype to assure the subsidence is within acceptable parameters.
- » We further recommend that rails should be tested in its design application.
- » All fixation points are to be used in order to reach the maximum load rating.
- » Appropriate fixation devices must be used.
- » The stated load ratings may not apply for special applications in which the rails are exposed to shock or are operated incorrectly or if frequent access is necessary.

**Example: Calculation of the load rating of a heavy duty rail type 7032**

**Rail length: 1200mm, Full extension.**

The stated lifting capacity P applies under assumption that the load center point is located at the center of the extension (Y/2)

Is the load center point (Y1) located differently please refer to the following formula:

Lifting capacity  $P(Y1) = \frac{1}{2} P Y / Y1$  (but maximum P)

**Example:**

Lifting capacity P = 640 kg, length of extension Y = 1200 mm, Load center point Y1 = 850 mm

**With the result:**

$P(Y1) = \frac{1}{2} P Y / Y1 = \frac{1}{2} \times 640 \text{ kg} \times 1200 / 800 = 480,0 \text{ kg}$

**Calculation of deflection**

- Mb = Bending moment
- W = Axial moment of resistant
- F = Bending force
- L = Length (extension lengths)
- f = Deflection
- sigma b = Bending stress

sigma b = Mb/W  
Mb = F\*L  
W =  $b \cdot h^2 / 6$

Mb = W \* sigma b  
F\*L =  $(b \cdot h^2 / 6) \cdot \text{sigma b}$   
F =  $(b \cdot h^2 / 6) \cdot \text{sigma b} / L$

F = the maximum allowable rate (in newton) the rail can be loaded with! To convert from newton [N] to kg [Kg], divide the rate F by  $g = 9,81 \text{ m/s}^2$ .

**Tray loaded with a single concentrated load, tightened onesided:**

- E = Modulus of elasticity in kN/mm<sup>2</sup>
- I = Moment of area

$I_x = b \cdot h^3 / 12$   
E = 196 ... 216 (Stahl)

$f = \frac{F \cdot l^3}{3 \cdot E \cdot I}$

*The alignment of the mounting affects the rail movement and the load rating. See the following illustrations.*

Good

Acceptable

Not to be recommended

## Full extension / Partial extension / Over extension

Extension models are to be chosen depending on stability criteria and the requirements of the installation dimensions.

The extension length of a partial extension is 75% the length of the rail. A full extension allows a pull out of the rail equivalent to the length of the rail. An over extension allows a pull out of the rail further than the length of the rail. Most of Leschhorn's extendable heavy duty rails are available with over extensions on request.

## Extension in both directions

On demand, many rail types are available with an optional passage blocking (cp. table p. 12-13). This special construction enables the mobile rails to be pulled into both directions to create a forward and backward movement.

partial extension = length of extension approx. 75 % the length of the rail

full extension = length of extension = the length of the rail

over extension = length of extension = bigger than the length of the rail

\*SL = length of rail, A = length of extension

## Length of the rail (SL)

» The length of the rail equals the maximum length of a fully inserted rail. Rule of thumb: Always use the maximum rail length possible for your purposes.

\*SL = length of rail, A = length of extension

## Installation width

- » The installation width constitutes the space the rail requires between body and drawer.
- » For an optimal performance add +0,2 mm up to +0,5 mm of the rail's nominal thickness. Example: For a rail with a nominal thickness of 30 mm the installation width should be between 30,2 mm and 30,5 mm.
- » Precision rails cannot absorb huge gap aberrations between body and drawer. For optimal rail movement the body and drawer have to be accurate and parallel to each other.

## Optional, customised adaptations

- » Handle – The drawer can be extended after operating a locking system. However, the resistance of the ball cage has to be overcome
- » Lockings keep the rails in the inserted or extended position until a handle is operated.
- » The latch/ engagement stabilises the rail in extended and closed position until additional pressure is applied to open or close it.
- » Self-closing with external drive slows down the opening and closing process and creates an optimal and smooth rail movement.
- » Mounting options are for example bayonet insertions or mounting angles

## Quality in all components – The materials used

All products used for Leschhorn's heavy duty rails are exclusively tested and of highest quality. The rails are manufactured to withstand heavy loads and high pressures in order to provide maximal safety.

The standard type of steel we use is zinc coated C45. There is a further choice between V2A or V4A. These materials are generally sufficient enough for most purposes. However, we also offer high quality aluminium rails on your request.

### Stainless steel item no. 1.4301 (X5CrNi18-10), AISI 304 (V2A)

#### Description:

An austenitic and acid resistant 18/10 Cr-Ni-steel, whose polycrystalline texture remains consistent after being sanded using thicknesses of up to 5 mm without any supplementary heat treatment. It is suitable for temperature loads of up to 600 degree Celsius. For even higher temperature loads titanium stabilised steel (item no. 1.4841) should be used.

The weld potential remains fine after several electrical procedures. Oxyacetylene welding should not be performed though. Besides a good polish potential the steel also features a great flexibility for deepdrawing, edge bending, roll forming etc. In the chipping process the steel tends to become brittle, it is therefore necessary to use tools made from high-alloy high speed steel or carbide tools.

#### Usage:

The steel is resistant to water, steam, humidity, food acids as well as light organic and inorganic acids and is suitable for use in various areas and industries such as the food industry, beverage production, pharmaceuticals and cosmetics industry, chemical apparatus engineering, architecture, vehicle manufacture, household articles and devices, surgical instruments, interior design and kitchen fittings, for sanitary facilities, jewellery and works of art.

The resistance to corrosion increases through electro polish, which is especially required by the pharmaceutical and food industry, in medicine and for facade engineering. However, Cr-Ni steel is not suitable for use in swimming pools (q.v. stress corrosion cracking).

### Stainless steel item no. 1.4571 (X6CrNiMo17-12-2), AISI 316 (V4A)

#### Description:

According to all popular welding processes it has a good weldability. A heat treatment after the welding process is usually not necessary. In special cases a heat treatment can be advisable, eg. if the release of welding stress seems necessary for reasons of chemical corrosion. An appropriate heat treatment could be 1/2 hour at 900 °C.

Good ductility. For this type of steel, similar to 1.4541 only well sanded tools should be used for metal-cutting processes. Both types of steel are polishable. The influence of very strong titanium carbides in the mechanical sanding process can however cause grooves in the surface by titanium carbide particles being pulled out and swept across the surface. The grooves are not yet visible until the electropolishing process is completed due to sanding dust covering the surface. This surface structure is in most cases unsuitable for the use in pharmaceutical plant engineering and construction.

#### Usage:

The increased resistance against general and localised corrosion predisposes this steel type for an especially wide range of applications in the field of chemical apparatus engineering.

#### More areas of application:

Further areas of application are nuclear energy, vacuum technology, reactor construction, ship building, furnace construction, sulfites and trans sulfites, cellulose, textile-, dyes-, fatty acid-, photochemical- and the pharmaceutical industries. This material is also increasingly used in the field of emission control.

## Lubricants

Leschhorn's telescopic heavy duty rails can be used in temperature dimensions of -30°C up to +200°C without the necessity of lubrication. Please speak to our technical support first should you intend to use rails in even higher temperature dimensions.

All heavy duty rails we deliver are lubricated with low temperature lubricants enabling them to be used frequently within temperature dimensions of approx. -20°C up to +110°C. Please consider that extreme high temperatures can also have a damaging effect on the lubricant.

## Environment of application

Leschhorn's milled heavy duty rails are created to be used in closed indoor spaces and should be protected from excessive humidity, chemical steam, dirt and corrosion.

The self-cleaning ball cages guarantee an undisturbed and maintenance free movement of the rail by preventing access to the ball storage by foreign particles. Additionally a lubricant is used with an equal durability to the rail when used under normal conditions. However, should cleaning of the rails still be necessary, it is recommended to lubricate the rails after the cleaning process with a high quality lubricant with extremely high compressional strength.

Leschhorn rails manufactured in Germany do not contain any of the following, from EU directives specified dangerous materials: From 2000/53/EG over end-of-life vehicles (27.06.02), 2002/95/EG to the restriction of usage of particular dangerous materials in electro- and electronic devices (27.01.03), 2002/96/EG and electro- and electronic end-of-life devices (27.01.03).

## 3018

**Material**  
Steel C45 zinc coated,  
stainless steel or aluminium

**Load rating**  
Up to 140 kg

**Extension**  
Full extension

**Profile**  
H = 30 mm, B = 18 mm

Optional extension in both directions

**Description**

- Length of the rail = length of extension
- Load per pair in extended position, balanced weight distribution and vertical rail structure.
- High resilience and little space requirements

**Advice**

- Appropriate to the applicable length the fixation is carried out with either four or six centrally positioned M6 threaded holes.
- Forward and backward movement is possible with an optional process locking.
- Custom-made products are possible due to our in-house production. (length, pattern of drilling).

- For more information refer to page 54–57.

\* Consider prefix when ordering. ST = Steel C45 zinc coated, NI = NIROSTA Stainless steel, AL = Aluminium  
 \*\*\* Weight per unit \*\*\*\* Load rating per rail pair

\*\* A = Length of the rail in inserted position

### Description

- Half the rail length = length of extension
- Load per pair in extended position, balanced weight distribution and vertical rail structure.
- High resilience and little space requirements

### Advice

- Appropriate to the applicable length the fixation is carried out with either two or three countersunk head screws M6 positioned in the centre of the U-profile.
- Horizontal rail structures are possible
- Custom-made products are possible due to our in-house production. (length, pattern of drilling).

- For more information refer to page 54-57.

## 7032

**Material**  
Steel C45 zinc coated,  
stainless steel or aluminum

**Load rating**  
Up to 660 kg

**Extension**  
Full extension

**Profile**  
H = 70 mm, B = 32 mm

Optional extension in both directions

### Description

- Rail length = length of extension
- Load per pair in extended position, balanced weight distribution and vertical rail structure.
- High resilience and little space requirements

### Advice

- Appropriate to the applicable length the fixation is carried out with either eight or twelve M8 threaded holes.
- The centered drillings are not necessary for a rail structure of up to 600 mm
- Forward and backward movement is possible with an optional process locking.
- Custom-made products are possible due to our in-house production. (length, pattern of drilling).

- For more information refer to page 54–57.

\* Consider prefix when ordering. ST = Steel C45 zinc coated, NI = NIROSTA Stainless steel, AL = Aluminium  
 \*\*\* Weight per unit      \*\*\*\* Load rating per rail pair

\*\* A = Length of the rail in inserted position

### Description

- Rail length = length of extension
- Load per pair in extended position, balanced weight distribution and vertical rail structure.

### Advice

- Appropriate to the applicable length the fixation is carried out with twelve M8 threaded holes.
- Forward and backward movement is possible with an optional process locking.
- Custom-made products are possible due to our in-house production. (length, pattern of drilling).

- For more information refer to page 54-57

## 9036

### Material

Steel C45 zinc coated,  
stainless steel or aluminium

### Load rating

Up to 850 kg

### Extension

Full extension

### Profile

H = 90 mm, B = 36 mm

Optional extension in both directions

## 4020

**Material**  
Steel C45 zinc coated,  
stainless steel or aluminium

**Load rating**  
Up to 245 kg

**Profile**  
H = 20 mm, B = 40 mm

Fig. differs from delivery package. Or-  
der vehicles separately..

### Description

- Linear guide is suitable to carry objects
- The linear guide is available in different lengths from 300 mm up to a maximum of 3000 mm.
- Weight per steel meter (C45) = 6,40 kg
- Weight per aluminium meter = 2,16 kg
- Load per vehicle in balanced weight distribution and vertical rail structure.
- Horizontal installation is possible too
- Appropriate to the length of the rail and its weight the fixation is carried out with M6 counter sunk drillings.

### Advice

- No automatic duplication of the maximum load of 245 kg when using two or more vehicles.
- Order vehicles that are included in the deliver package separately

4020 *	A**	B	C
	mm	mm	mm
4020 - 30	300	25	...
4020 - ...	...	25	...
4020 - 300	bis 3000	25	...

\* Consider prefix when ordering. ST = Steel C45 zinc coated, NI = NIROSTA Stainless steel, AL = Aluminium

\*\* A = Length of the rail in inserted position

**Description**

- Suitable to carry objects in appropriate guiding device.
- The linear guide is available in different lengths from 300 mm up to a maximum of 3000 mm.

**Advice**

- Order vehicles as singles
- The vehicle will be mounted to the object being transported with two centrally positioned M8 threaded holes.
- No automatic duplication of the maximum load of 245 kg when using two or more vehicles.
- Custom-made products are possible due to our in-house production. (length, pattern of drilling).

- For more information refer to page 54-57
